

# MULTINAK S

THE PROFESSIONAL HEAVY DUTY STAPLER

WE CREATE A PROFESSIONAL IMPRESSION

The Multinak twin headed staplers allow the efficient production of jobs requiring frequent change-over between flat and saddle stapling. Versatile and durable, the machines are the industry standard for all types of commercial and inplant applications.

■ The power operated Nagel Multinak S or treadle version Nagel Multinak FS feature two stapling heads that can vary in position between 80 – 155 mm.

The preformed staples ensure accurate production of booklets and pads from just 2 up to 270 sheets. For brochures or booklets to be filed in ring binders without being punched the original Nagel loop staples are the perfect solution.

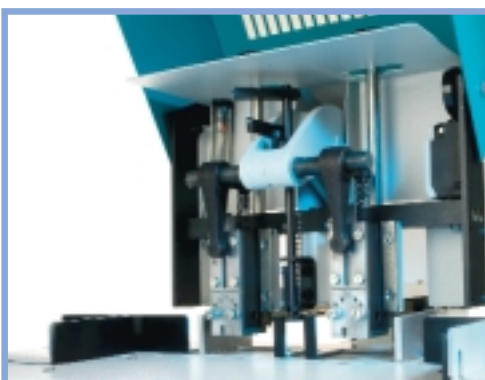

NAGEL MULTINAK FS with treadle.

Easy transition from flat to saddle stapling.

■ The change-over from flat to saddle stapling is made by simply flicking over the table. The optional table extension includes a back stop bar and makes it easy to handle large formats like calenders and DIN A3 size. Special clamps for small formats to centre and hold down the brochure come as standard.

The Multinak twin headed staplers operate extremely quietly and combine consistent stapling accuracy with high performance operation. Both models are conform to the European CE safety standards.

Sturdy stapling heads for efficient production.

Option for large formats: the NAGEL MULTINAK table extension.

## Professional finishing adds value to your products.

### ■ Power clenching system

The clenching mechanism provides a flat stitch, pushing the legs of the staple flat against the material to ensure strong, perfectly formed stitches each time.

### ■ Operating table

Fast change-over from flat to saddle stapling is effected by simply flicking over the table. An optional extension table including a back stop bar is recommended for large formats.

### ■ Wear parts

The operator can easily replace all wear parts – no technical support is required.

### ■ Versatility

Quick and easy set-up of the heads to take different wire thicknesses and staple sizes, even loop staples. Stapling heads for thick pads up to 27 mm are available as option.

### ■ Reliability

The Multinak is designed to give years of trouble-free service. Fast, versatile and remarkably reliable, the Multinak is a high performance stapler.

### ■ Safety standards

Special safety precautions comply with the European CE safety standards.

NAGEL MULTINAK S with new table for flat and saddle stapling.

## The chisel point of the original NAGEL staples effects effortless penetration of paper, cardboard, plastic, leather, textiles or wood.

■ Manufactured on highly specialised machines we only allow minimum tolerances for maximum reliability and use a special glue to prevent jammed stapling heads. There are five different wire thicknesses available from 0,4 mm to 1,1 mm and eleven different lengths from 6 mm to 30 mm.

The original Nagel loop staples enable booklets and brochures to be filed in ring binders without being punched. Filed brochures can be opened perfectly flat without hurting the paper. The content is protected against losses through punch holes and more print space is available.

## Technical specifications

Number of stapling heads	2
Distance between heads	80 – 155 mm
Brochures	from 2 sheets (80g)
Pads	up to 270 sheets (80g)
Staple leg length	6 – 18 mm
Staple types	24, 26, 30
Loop staples	yes
Clamps for small formats	standard
Extension table with back stop bar	option
Stapling heads B for pads up to 27 mm	option
Staple leg length	6 – 30 mm
Staple types	50, B 50
Power supply	230 V 50 Hz or 400 V 50 Hz foot treadle
Certification	CE
Weight net / gross	100 / 111 kg power operated version 62 / 75 kg treadle version
Dimensions	
H x W x D (net)	110 x 60 x 75 power operated version 128 x 60 x 75 treadle version
H x W x D (gross)	130 x 75 x 75 power operated version 150 x 75 x 75 treadle version
